

KHUSHI PATEL

Computer Science Student, Wilfrid Laurier University

khushiixpatell@gmail.com | github.com/khushiixpatell | linkedin.com/in/khushi-x-patel

EXPERIENCE

President, Google Developer Groups on Campus Laurier

Sept 2025 – Present

- Lead the university's Google Developer Groups on Campus chapter, overseeing technical workshops, networking events, hackathons, and other initiatives from initial planning through execution
- Build internal automation tools using the Gemini API to reduce redundancies in operating the chapter such as drafting proposals, building sponsorship pitches, sending email blasts with chapter events and updates
- Organize and deliver technical workshops that expand students' knowledge beyond the classroom and provide hands-on experience with Google technologies, developer tools, and AI resources
- Collaborate with external organizations, industry partners, and student groups to coordinate large-scale technical events, develop partnerships, and provide students with technical, professional development, and networking opportunities

Event Coordinator, Independent

Summer 2025

- Planned and coordinated events end to end, managing logistics, timelines, and stakeholder communication for multiple concurrent events
- Used Trello to track tasks and deadlines, reprioritizing tasks as needs shifted throughout each event cycle

Software Designer Intern, Zeuty

Apr 2024 – Sept 2024

- Designed UI screens and user flows in Figma for a startup product, and worked with the development team through implementation
- Gained firsthand experience with the gap between a polished design and an implementable one, and revised designs mid-sprint more than once when technical constraints surfaced during implementation

PROJECTS

GDG Command Hub

June 2026 – Present

React, TypeScript, Firebase, Gemini API

- An internal operations tool for managing a GDG chapter; the Gemini API handles recurring content generation and drafting
- Also includes task tracking, csv analytics export, feedback collection, analytics for expenses and engagement
- Currently only for personal use, the next phase is adding multi-user support as well as upgrading to incorporate agentic AI

Hockey League Database

2026

SQL, Relational Database Design

- Designed and built a full relational database from scratch, including schema design, normalization, and referential integrity constraints
- Wrote queries using joins, aggregations, and filtering to extract and analyze data across multiple related tables

BiteWise

2025

React, Node.js/Express, MongoDB

- A full-stack app for people juggling overlapping dietary restrictions, it includes recipe filtering, nearby restaurant search with filtering, saved favorites, adding personal recipes
- Built independently end to end: React frontend, Node/Express backend, and integration of two third-party APIs (Edamam, Overpass)

Grammatical Error Correction - Seq2Seq with Attention and No-attention models

2026

Python, PyTorch, NLTK, Gemini API

- Group project comparing an LSTM sequence-to-sequence model against Gemini for grammatical error correction
- Built the data preprocessing pipeline, including tokenization, vocabulary construction, PyTorch dataset creation, for a 50,000 sentence training corpus (40k/5k/5k train/val/test split)
- Wrote the training and evaluation scripts (GLEU and exact match metrics) for the attention and no-attention based models with the intent to isolate what attention contributed to correction accuracy
- Integrated Gemini as a zero-shot/few-shot LLM baseline and built the qualitative and sentence-length analysis to compare LSTM and LLM outputs

EDUCATION

Wilfrid Laurier University — Waterloo, ON

Expected Graduation: 2028

Honours Bachelor of Science in Computer Science, Minor in Leadership

Coursework in data structures, object-oriented programming, software engineering, and artificial intelligence.

SKILLS

Languages: Python, Java, JavaScript/TypeScript, C, SQL

Frameworks & tools: React, Node.js/Express, Firebase, MongoDB, Git, Figma

AI: Gemini API, Google AI Studio, PyTorch, NLTK, prompt engineering

Data & systems: Relational database design, data structures
